

Fig. 12

Solutions to typical problems If braid is twisting too much, turn set screw for braid-cutting blade + 90°. If, after repeated adjustment, most of braid will not cut properly, your blade set is probably worn out. Rotate cassette to try new blade set. When adjusting the blade depth, always start with the blade no. 1, than 2 and 3.

Each cassette has **two different** set of blades. Each set lasts250 - 500 strips, depending on what cables are being stripped.

To change or rotate the cassette Move the locking latch in the direction of the arrow, fig. 12. Then push cassette out of tool

by inserting wrench through

The cassette has a designation on the side that **refers to the stripping dimensions.** Use this

designation when ordering a

hole in bottom of the tool,

fig. 12.

new cassette.

Note

The adjustment screws are mounted in a screw holder, fig. 13.

It might necessary to use special screw holders, depending on the strip configuration, see fig. 14.

How to change screw holders

Open the tool and remove the cassette. Push the screw holder out of the tool by using the wrench, Mount the new screw holder, fig. 14

COAXIAL CABLE STRIPPER

Maxi Corex®

INSTRUCTION FOR STRIPPING COAXIAL CABLE

Use safety Glasses to Avoid Eye Injury Benutzen Sie eine Sicherheitsbrille um Ihre Augen zu schützen Utiliser des lunettes de sécurité pour éviter une blessure aux yeux Usare gli occhiali di sicurezza per evitare il rischio di ferite agli occhi Se deben usar grafas de protección para evitarlesiones de la vista Draag ter voorkoming van oogletsei een veiiligheidsbril Använd skyddsglasögon för att undvika ögonskador Xpnoıµomoiɛiɛ προστατευτικά γuαλιά για να μην τρανµατίσετε τα µάτια σας Utilize óculos de protecção para evitar lesões nos olhos

MAXI COREX® is available in two versions: for 2-step stripping and for 3-step stripping.

- A. Center Conductor
- B. Braid
- C. Insulation

3-step

A. Center Conductor B. Dielectric C. Braid D. Insulation

Cable O.D. mm/Inches	P/N	V-block Colour
7,0-9,0/.280350"	MV-2	Red
9,0-11,5/.350450"	MV-7	Blue
11,5-14,0/.450550"	MV-4	Yellow
- Josep		Follow the

When using the red or blue Vblocks, the two inner supports (red) should be used. The inner supports go into the lower half of the tool body, on the outside of the knife cassette, see fig. 1.

P/N	V-block Colour	Inner supports (2 Pcs.)	
MV-2	Red	Yes	
MV-7	Blue	Yes	
MV-4	Yellow	Νο	

se steps when stripping with the Maxi Corex® Coaxial Cable Stripper.

A. Adjust slide to position 4 or 5.

- B. Open tool by rotating locking latch downward. (fig. 3).
- C. Mark jacket of cable for center conductor length.

(If you have a simple Wirecutter, ignore this instruction. You can cut center conductor to length after the strip.)

Chech that the correct Vblock is being used!

- F. Rotate the tool around coax about 5 times, (fig. 7). Push slide forward to next position in sequense. Rotate tool again. Then push slide forward to final position and rotate the tool final 5 times.
- G. Open the tool and remove the stripped cable, see fig. 8. Remove the stripped parts. If the insulation is hard to remove, use a knife to slit it open, fig. 8. If the center conductor is too long, adjust this with a cutter.
- H. Inspect your first strip. Determine how deeply each blade has scored the cable.
- I. Adjust blade depth to match your cable size by turning allen screws at base of tool. (fig. 9).

Tips: If a blade is near its proper position, turn its set screw app. ± 90°.

If a blade is a little far off from its proper position, turn its set screw ± 270° to 360°.

Note: Adjust the tool so that the appropriate slide progression works, (fig. 6. If your cable size does not appear in Fig. 6, develop your own 2- or 3-stage sliding sequense.

J. Try.stripping again, following steps A trough I. Ifstrip is still not acceptable, adjust blades one more time, following instructions H and I.

How to change V-blocks

Take the V-block you want to replace and pull it upwards, halfway out of the tool. You should not let go of the springs. Push the new V-block into position before removing the old one completely. If the two springs will spring back into the tool body, use a thin knife or screwdriver to hold them up while inserting the new V-block.

Fig. 6

- D. Hold the tool with the handle towards you and insert coax from left into the groove position. Close and latch tool.
- E. Push slide forward to appropriate start position.(see fig. 6).

Coax	V-block	Inner support	Slide- progres- sion
RG 6	Red	Yes	5, 3, 1
RG 213	Blue	Yes	5, 3, 1
Twinax	Red	Yes	5, 3, 1
Ethernet	Blue	Yes	5, 3, 1
